## SCA110 and SCA111 Series

## Stand Alone Accelerometer

FEATURES

- Stand alone accelerometer in zinc housing
- Available ranges $\pm 1.2 \mathrm{~g}, \pm 2 \mathrm{~g}$
- Accurate over a wide temperature range $-40^{\circ} \mathrm{C} . . .+125^{\circ} \mathrm{C}$ without any compensation
- Electrical connection through the moulded-in PUR cable
- Standard analogue output
- Acceleration in the direction of the arrow will increase the output voltage

## BENEFITS

- Long term stability
- Excellent overload durability
- Zinc hausing (IP66) with overload protection make the accelerometer durable enough to stand a drop from 2 meters onto a concrete floor
- Meet typical automotive EMC requirements
- Easy to use

APPLICATIONS

- Acceleration measurement
- Inclination measurement
- Vibration measurement
- Motion measurement

| ELECTRICAL CHARACTERISTICS |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Parameter | Comment | $\begin{aligned} & \text { SCA110- } \\ & \text { C12H1W } \end{aligned}$ | $\begin{aligned} & \text { SCA111- } \\ & \text { C12H1W } \end{aligned}$ | $\begin{aligned} & \text { SCA111- } \\ & \text { CC4H1W } \end{aligned}$ | Units |
| Sensitivity error (6) | @ room temperature | $\pm 2$ | $\pm 2$ | $\pm 2$ | \% |
|  | $-20 \ldots 85^{\circ} \mathrm{C}$ | $\pm 3$ | $\pm 3$ | $\pm 3$ |  |
|  | $-40 \ldots 125^{\circ} \mathrm{C}$ | $\pm 4$ | $\pm 4$ | $\pm 4$ |  |
| Typ. Non-linearity (7 | Deviation from $\pm 1 \mathrm{~g}$ line | $\pm 20$ | $\pm 20$ | $\pm 60$ | mg |
| Frequency response | -3 dB point (8 | $400 \pm 150$ | $400 \pm 150$ | $115 \pm 55$ | Hz |
| Output load | resistive (min.) | 20 | 20 | 20 | kt |
|  | capacitive (max.) | 20 | 20 | 20 | nF |
| Supply voltage effect | Offset | $\pm 35$ | $\pm 25$ | $\pm 50$ | mg |
| Cross-axis sensitivity (9 |  | $\pm 4$ | $\pm 4$ | $\pm 4$ | \% |
| Typ. Output noise | V(AC)RMS ( DC $_{\text {... } 4 \mathrm{kHz} \text { ) }}$ | 5 | 5 | 5 | mV |
| Ratiometric error(11 | $\mathrm{Vdd}=4.75 . .5 .25 \mathrm{~V}$ | $\pm 2$ |  |  | \% |
| Supply voltage effect | Offset |  | $\pm 25$ | $\pm 50$ | mg |

| PERFORMANCE CHARACTERISTICS |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Parameter | Comments | $\begin{aligned} & \text { SCA110- } \\ & \text { C12H1W } \end{aligned}$ | $\begin{aligned} & \text { SCA111- } \\ & \text { C12H1W } \end{aligned}$ | SCA111CC4H1W | Unit |
| Supply voltage | Ratiometric ${ }^{1}$ | $5 \pm 0.25$ | 7-27 | 7-27 | V |
| Supply current | Typical, without load | 2 | 2 | 2 | mA |
| Measuring range ${ }^{12}$ |  | $\pm 1.2$ | $\pm 1.2$ | $\pm 2$ | 9 |
| Measuring direction ${ }^{(3}$ |  | Horizontal | Horizontal | Horizontal |  |
| Zero point ${ }^{(9)}$ | Nominal value | 0.5 * Vdd | 2.5 | 2.5 | V |
| Sensitivity ${ }^{(4)}$ | Nominal value | 0.3 * Vdd | 1,5 | 1 | V/g |
| Offset error ${ }^{(5}$ | @ room temperature | $\pm 50$ | $\pm 50$ | $\pm 75$ | mg |
|  | $-20 \ldots 85^{\circ} \mathrm{C}$ | $\pm 80$ | $\pm 80$ | $\pm 130$ |  |
|  | $-40 \ldots 125^{\circ} \mathrm{C}$ | $\pm 120$ | $\pm 120$ | $\pm 195$ |  |

Note $1 \quad$ SCA110 (5V) Accelerometers are ratiometric; Offset and Sensitivity are proportional to supply voltage.
Note 2 Output swing $0.5-4.5 \mathrm{~V}$ with nominal supply voltage.
Note 3 Measuring direction is perpendicular to the mounting plane (see Note 10). Zero is defined with no acceleration and the device mounted in the prescribed mounting plane (see Note 10 and pictures page 2)
Note $4 \quad$ Sensitivity specified as $[$ Vout $(+1 \mathrm{~g})-\operatorname{Vout}(-1 \mathrm{~g})] / 2[\mathrm{~V} / \mathrm{g}]$.
Note 5 Zero point error specified as (Vout $(+0 \mathrm{~g})-\mathrm{Vdd} / 2) /$ Vsens [g] (room temp. error included); Vsens = Nominal sensitivity.
Note 6 Sensitivity error specified as $\{[$ Vout(+1g)-Vout(-1g)] / 2 - Vsens $\} /$ Vsens $\times 100 \%$ Vsens $=$ Nominal sensitivity.

The ratiometric error is specified as: $\quad R E=100 \% \times\left(1-\frac{\operatorname{Vout}(@ V x) \times \frac{5.00 \mathrm{~V}}{V x}}{\operatorname{Vout}(@ 5 V)}\right)$

Note $7 \quad$ Relative to the straight line between $\pm 1 \mathrm{~g}$. Note $8 \quad$ Output has true $\mathrm{DC}(\mathrm{OHz})$ response.
Note 9 The cross-axis sensitivity determines how much acceleration, perpendicular to the measuring axis, couples to the output. The total cross-axis sensitivity is the geometric sum of the sensitivities of the two axes, which are perpendicular to the measuring axis.
Note 10 Offset measuring direction in figures (see picture page 2)
Note 11 Supply voltage noise also couples to the output, due to the ratiometric (output proportional to supply voltage) nature of the accelerometer.

## Horizontal

## Vertical

DIMENSIONS

The accelerometer weighs approximately 60 g with a standard 30 cm PUR cable ( $3 \times 0.5 \mathrm{~mm} 2$ ), excluding connector.

WIRING INFORMATION
Red = Supply voltage
White = Ground Yellow = Output

Recommended mounting screw size: M4
