Description: Channel sliders let you achieve precise linear motion with Actobotics channels. The B type channel sliders enclose the right, left, and open top of a channel while leaving the underside hub patterns open for additional attachments. There are 9 through-holes on each slider for multiple connection points.

Actobotics is a robotics building system based around extruded aluminum channels, gears, precision shafts, and ball bearings. Thanks to the two standardized hole patterns, nearly all Actobotics components can be intuitively connected together. The wide range of components makes building complex electromechanical prototypes or finished projects a reality.
